district BY ZOMATO

District Analytics Hub

aws → snowflake →

Project Objectives :

• Automated Ingestion : Raw booking data (CSV) lands in AWS S3 and is auto-loaded into Snowflake's Bronze layer via Snowpipe with event-driven S3 notifications (SQS-Queue) - zero manual intervention.

• Dimensional Modeling : Silver layer transforms raw data into a Star Schema with 6 dimensions (including SCD Type 2 customer tracking) and 3 fact tables using a hybrid of Dynamic Tables, Streams, Tasks, and Stored Procedures.

• Analytics-Ready Data Marts: Gold layer delivers 9 pre-Agg. Dynamic Tables (Data Marts) covering customer segmentation, revenue trends, venue/movie performance, cohort retention, and District Pass subscription analytics.

• Governance & Delivery : Enterprise-grade security with 3 RBAC roles and 4 dynamic masking policies protects PII across all layers; Power BI consumes Gold tables via native Snowflake connector in Import mode with Duo MFA authentication.
